

## Brainstorming & Idea Prioritization Template

|                      |                                 |
|----------------------|---------------------------------|
| <b>Date</b>          | 24 June 2026                    |
| <b>Team ID</b>       | SWTID-2026-5589                 |
| <b>Project Name</b>  | Credit Card Approval Prediction |
| <b>Maximum Marks</b> | 3 Marks                         |

### Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

| S.No | Team Member            | Idea / Suggestion                                                                                                                  | Category           | Group No. |
|------|------------------------|------------------------------------------------------------------------------------------------------------------------------------|--------------------|-----------|
| 1    | Likhita Priya Orsu     | Build a centralized model using <b>XGBoost and Random Forest</b> to handle high-risk vs low-risk multi-class data splitting.       | Model Optimization | 1         |
| 2    | Prathipati Gowtham Sai | Design a <b>Flask web dashboard</b> for bank credit analysts to input income and employment details for real-time verification.    | Web Interface      | 2         |
| 3    | Pathan Ansar Khan      | Deploy the finalized pipeline to <b>IBM Watson Machine Learning</b> cloud to provide continuous uptime and external API endpoints. | Cloud & Deployment | 3         |

|   |                       |                                                                                                                                           |                     |   |
|---|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------|---------------------|---|
| 4 | Modugula<br>Yasaswini | Convert multi-class past-due loan codes into <b>binary labels</b> (0 or 1) using Scikit-Learn to filter out high-risk applicants quickly. | Feature Engineering | 1 |
| 5 | Likhita Priya<br>Orsu | Add a <b>customer self-service calculator portal</b> where applicants can check their pre-eligibility scores before final submission.     | Web Interface       | 2 |

## Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

| Group No. | Final Idea                                                                                                                                    | Feasibility (High/Medium/Low) | Importance (High/Medium/Low) | Priority | Selected (Yes/No) |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|------------------------------|----------|-------------------|
| 1         | <b>Machine Learning Pipeline &amp; Feature Engineering</b><br>(Binary risk modeling with Random Forest/XGBoost, processing raw status codes). | High                          | High                         | 1        | Yes               |
| 2         | <b>Flask Application Development</b><br>(Interactive UIs for both Bank Credit Analysts and Customer                                           | High                          | High                         | 2        | Yes               |

|   |                                                                                                                               |        |      |   |     |
|---|-------------------------------------------------------------------------------------------------------------------------------|--------|------|---|-----|
|   | Self-Service portals).                                                                                                        |        |      |   |     |
| 3 | <b>IBM Watson Cloud Deployment</b><br>(Constructing a real-time web endpoint pipeline for automated web application queries). | Medium | High | 3 | Yes |
