

Data Collection and Preprocessing Phase

Date	24 June 2026
Team ID	SWTID-2026-5589
Project Title	Credit Card Approval Prediction
Maximum Marks	2 Marks

Data Collection Plan & Raw Data Sources Identification Report:

Elevate your data strategy with the Data Collection plan and the Raw Data Sources report, ensuring meticulous data curation and integrity for informed decision-making in every analysis and decision-making endeavor.

Data Collection Plan Template

Section	Description
Project Overview	The machine learning project aims to predict credit card approval based on applicant information. Using a dataset with features such as gender, liability information, loan count, count of EMIs paid off/ existing, no. of employment days, etc. the objective is to build a model that accurately classifies credit card approval eligibility facilitating efficient and informed decision-making.
Data Collection Plan	1. Search for datasets related to credit card applications, financial information and applicant details. 2. Prioritize datasets with diverse demographic information.
Raw Data Sources Identified	The raw data sources for this project include datasets obtained from Kaggle , the popular platform for data science competitions and repositories. The provided sample data represents a subset of the

	collected information, encompassing variables such as gender, marital status, income, and other related details for machine learning analysis.
